

The Physician's Treatment Plan

Optional. Done at home, on your own. Graded on reasoning, not on matching anybody else's answer.

COURSE Medical Interventions	ASSIGNED Thursday, September 17, 2026	DUE Your choice, by the exam
WORTH Extra credit	LENGTH One page	RULE Every choice names its evidence

YOUR CHARGE TODAY

You have identified the organism. A physician has to turn that name into a plan a real person can follow, and has to say in advance what would tell them the plan is wrong.

YOU TURN IN

- **This sheet, completed.** Hand it in any time before the exam.

Time: At home, on your own.

GREEN RULE You write here. Nothing else on the page is yours to fill in.	GOLD GROUND Given to you. Do not re-derive it. Controls and reference values live here.	GREY GROUND Instructions from Mr. Mendoza. Read before you start the step.	RED GROUND Safety. Read it before you touch any material.
--	---	--	---

WHY THIS MATTERS

Every treatment plan a physician writes has the same five parts, and the fifth part, the one that says what would prove the plan wrong, is the part that protects the patient. A plan with no way to be wrong is not a careful plan. It is a confident one.

READ THIS

Write as the physician on this case. Use your own identification and the treatment table in your packet index. Where you are not sure, say so in the plan. An honest uncertainty is worth more marks than a confident invention.

YOU COMPLETE THIS

1. Diagnosis. The organism, and the evidence that named it. Cite your three BLAST numbers.

YOU COMPLETE THIS

2. Treatment. The drug or approach, and why this one for this organism.

YOU COMPLETE THIS

3. Monitoring. What you will check, and how often, to know it is working.

YOU COMPLETE THIS

4. What would tell you that you were wrong, and what you would do then.

YOU COMPLETE THIS

5. What you would say to the patient, in plain words, in three sentences.
